Course Description: This course will provide a survey of the differential and integral calculus of polynomial, rational, exponential, and logarithmic functions with an emphasis on applications to problems from business, economics and life sciences.

Text: Bittinger, Ellenbogen and Surgent, *Calculus and Its Applications*, 10th Edition, Addison Wesley.

Learning Outcomes:

1. The student will be able to compute limits (L1).
2. The student will be able to differentiate polynomial, rational, exponential, and logarithmic functions (L1).
3. The student will be able to apply differential calculus to problems from business, economics, and life science (L1).
4. The student will be able to integrate polynomial, rational, exponential, and logarithmic functions and to apply the Fundamental Theorem of Calculus (L1).
5. The student will be able to apply integral calculus to problems from business, economics, and life science (L1).
6. The student will understand the basic techniques of integration (L1).
